HygieneGuard ATP

The 10 second hygiene test

The emma HygieneGuard ATP is your go-to solution to verify that every surface meets the highest hygiene standards. It helps prevent the spread of pathogens by identifying risks, verifying existing hygiene protocols, and instantly indicating where corrective actions, such as recleaning, are needed.

Whether you are a veterinarian, a dairy advisor or you are running a dairy farm, this powerful tool enables you to take control of hygiene across your operations, from facilities and personnel to livestock trailers, equipment, barn fittings, milking machines and deliveries. In just 10 seconds, you can measure the cleanliness of any surface at a microbiological level, thanks to advanced bioluminescence technology.

The emma HygieneGuard ATP detects adenosine triphosphate (ATP), a molecule found in all living cells, including bacteria. By accurately measuring ATP levels, this test provides an objective, real-time assessment of whether a surface is clean or requires further corrective

replacement.

This all-in-one test comes with a pre-wetted swab bud for optimal sampling, ensuring reliable, consistent results. A unique, liquid-stable reagent provides superior reproducibility and robustness of the ATP measurements.

This helps to immediately measure and verify the effectiveness of your hygiene protocols and reduce the spread of pathogens by identifying and addressing potential contamination areas.

Overview of the advantages:

- Verification of cleaning, hygiene and biosecurity protocols
- Identification of risks
- Measuring precise hygiene data
- Reducing spread of pathogens
- Cost efficient
- Quick and easy to use

Enhance your care with the emma HygieneGuard ATP by testing and refining cleaning protocols based on real-time data. This technology eliminates guesswork, enabling comprehensive audits and proactive measures to stop pathogens before they spread. From milking equipment to high-traffic areas, ATP testing ensures superior hygiene across all operations, protecting your animals and enhancing the reputation of your practice with proven hygiene monitoring that upholds the highest safety standards.

Contact us to discover how the emma HygieneGuard ATP can be integrated into your veterinary or agricultural practice, providing unmatched assurance of a clean and safe environment for every animal. With the emma HygieneGuard ATP, hygiene isn't just a promise, it's a proven standard. We are happy to show you how ATP testing can lead to sustainable success in managing mastitis and improve hygiene protocols in your herds.
